

1                   ABSTRACT

2

3         The present invention is directed to an anti-adhesion patch, which is constructed using a  
4         tissue equivalent technique. The anti-adhesion patch comprises a collagenous material and at  
5         least one non-living cellular component. Also provided is a method for preventing tissue  
6         adhesions between organs and other tissues being operated upon during surgical procedures by  
7         utilizing the anti-adhesion patch disclosed herein.
